Data Types \ String \ Expression

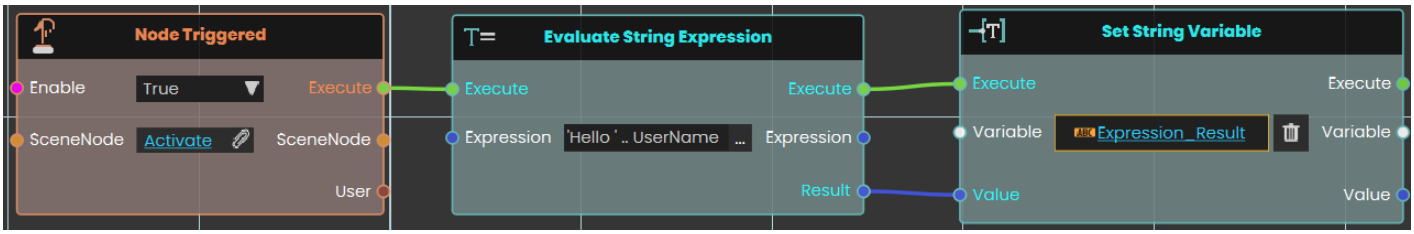

Evaluate String Expression

The **Evaluate String Expression** response enables the system to implement an expression in Lua language. Supported expressions can be found at this **link**. Once the response is executed, the expression result can be acquired through the Result port.

Example

In this example, an **Evaluate String Expression** response enables the system to execute a Lua expression. Once the response is executed, the result of the expression can be retrieved through the **Result** port and can be displayed using a variable writer during the VR Experience.
