User Query

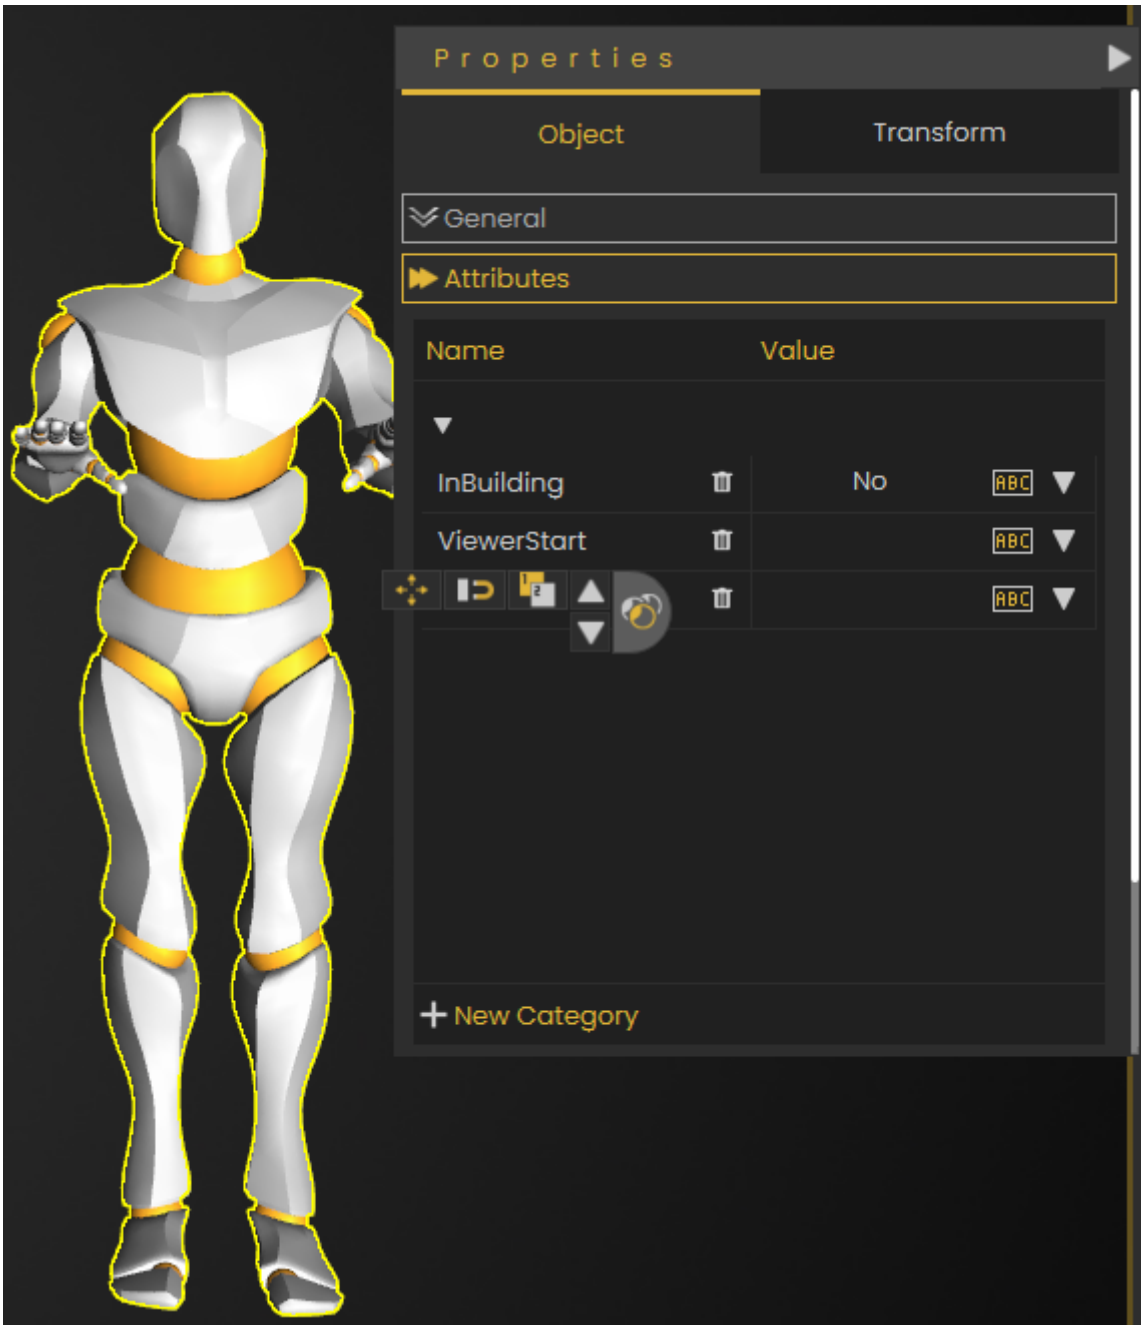

User Query

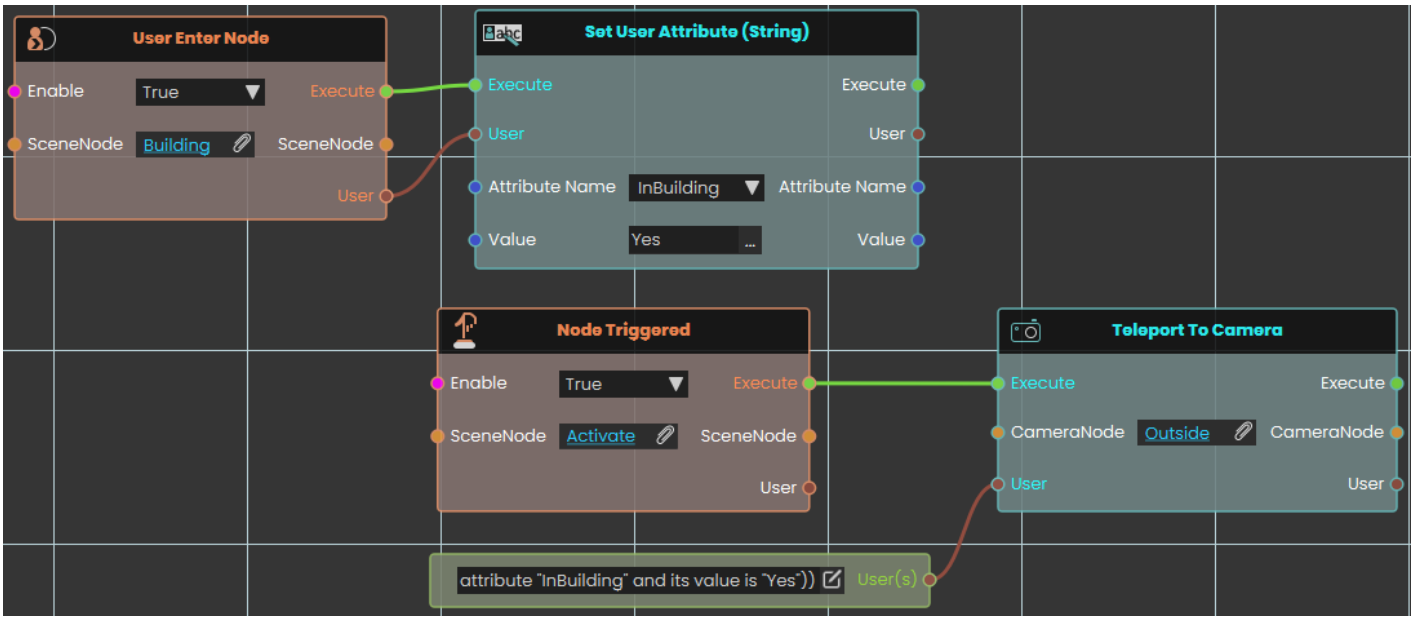

The **User Query node** enables the system to identify a user based on their attributes within the VR environment. This node enhances interactivity by allowing responses to be customized for individual users, triggering specific actions based on **user attributes** as part of their virtual experience.

Example

In this example, the **User Query node** is used to acquire specific attributes from specific users, in order to perform specific response to them

Once the User enters the object named **Building**, their InBuilding attribute's value becomes **Yes,** then when user triggers object named **Activate**, the users with attribute name **InBuilding** and its value is **Yes** gets teleported to CameraNode named **Outside**'s location.
